### Abstract

---

**PURPOSE:** To obtain the electronic mail device in which a sender does not send directly relevant information relating to an electronic mail and a receiver easily collects the relevant information as required.

**CONSTITUTION:** When the user 7 at the receiver side selects relevant information identifier 11 or 12 included in an electronic mail received by the user, a relevant information request is sent to a relevant information processing section 8 through a user interface section 6 and a processing section 3. The relevant information processing section 8 sends the relevant information request to an electronic mail device 1 at the sender side storing the relevant information on request. On the other hand, the electronic mail device 1 at the sender side receiving the relevant information request sends the relevant information stored in the relevant information processing section 8.
